🧠 Languages & Frameworks: React.js (Redux / Redux Toolkit / Zustand), TypeScript
🎨 Styling: CSS Modules, SCSS, Tailwind, Styled Components
🐧 Tools & Platforms: GitLab, GitHub, Linux, Docker, Windows
🗣️ Languages – English

PERSONAL PROJECTS

React.js Music Player

- A music application fully realized in React.js, still under development.
- React Router, Context Api, SCSS, Firebase implementation

Eat and split

- This is an application created entirely in React.js that allows you to split the bill. In this web application we can add a new friend to share the bill with at a restaurant.

Far Away React App

- An old-fashioned app that will help you not to forget anything when you go on holiday.

Mapty app

- Create your own workouts using the Mapty App. This app uses geolocation API and the Flutter library.

Pizza-App-React-App

- This is a project built entirely in React. Here we can see the menu of our fictitious restaurant, what kind of pizzas we can order, the price, but also the ingredients used for our products.

Forkify-App

- This app helps us to search for tasty recipes or meals.

React.js Navigation

- A navigation bar that is created entirely in React.js
- This navigation is very responsive, with components updating very quickly.
